Objective: Computer Science graduate seeking a software development role or other tech related opportunities.

Education:
BS Computer Science
Graduated December 2025.
Kent State University, Kent, Ohio
GPA: 3.89

Skills:
Languages: C++, Python, C#, JavaScript, GDScript, HTML, CSS, SQL, Bash, LaTeX
Frameworks/Libraries: React, Node.JS, Express, Flask, Pygame, Godot
Tools: Git, VSCode, VisualStudio, OpenCode
Database Tools: SQLite, MySQL

Coursework: Design Patterns, Algorithms, Human Interfaces and Computing, Introduction to Databases, Artificial intelligence, Introduction to Software Engineering, Introduction to Computer Graphics, Introduction to Game Design, Embedded Systems

Projects

Horror Game Prototype July 2026 - Present
Link: https://codeberg.org/SunCh1p/3D-Horror-Prototype

- Developing a first-person horror game in Godot 4.7 and GDScript, engineering modular player and enemy systems for extensible gameplay
- Implemented finite-state-machine enemy AI (idle/chase/attack) and player controller, ensuring predictable, debuggable behavior across gameplay states
- Engineered a signal-bus event system decoupling gameplay, UI, and audio subsystems to keep communication clean and maintainable; implemented procedural dungeon generation for replayable level variety

OpenGL Renderer March 2026 - July 2026
Link: https://codeberg.org/SunCh1p/OpenGL-GLFW

- Designed and built a 3D renderer in C++ with OpenGL and GLFW, structuring the pipeline for extensible multi-light rendering
- Implemented Phong shading with diffuse/specular maps and a GLSL material system to deliver realistic surface lighting
- Supported directional, point, and spot light casters, enabling multi-light scenes with consistent rendering performance

OpenGL Game August 2025 - December 2025
Link: https://github.com/SunCh1p/ComputerGraphicsClass

- Developed a 3D game in C++ and FREEGLUT, driving gameplay through a custom Entity Component System for clean separation of logic and rendering
- Implemented collision detection, animations, projectiles, model loading, and a scoring system, delivering a complete playable experience

Doc Reformed August 2025 - December 2025
Link: https://github.com/ch33s322/CS49999-Capstone

- Delivered a PDF-splitting desktop application in .NET and WPF as a capstone project, architected around a pipe-and-filter design for modular, extensible document processing

ItemQuest January 2025 - May 2025
Link: `https://github.com/Item-Quest/TeamBravo`

- Built a real-time multiplayer game with live scoring using Socket.IO, Flask, React, and TensorFlow.js, enabling simultaneous play with instant feedback
- Collaborated on a 10-person team using scrum methodology and a GitHub kanban board, ensuring on-time delivery within a single semester
