Connor Blaha

blaha.s.connor@gmail.com • *330-606-0527* • *Github: https://github.com/SunCh1p*

Objective: Computer Science graduate seeking a software development role or other tech related opportunities.

Education:
BS Computer Science
Graduated December 2025.
Kent State University, Kent, Ohio
GPA: 3.89

Skills:
Languages: C++, Python, C#, JavaScript, GDScript, HTML, CSS, SQL, Bash
Frameworks/Libraries: React, Node.JS, Express, Flask, Pygame, Godot
Tools: Git, VSCode, VisualStudio, OpenCode
Database Tools: SQLite, MySQL

Coursework: Design Patterns, Algorithms, Human Interfaces and Computing, Databases, Artificial Intelligence, Software Engineering, Computer Graphics, Game Design, Embedded Systems

Projects

Horror Game Prototype July 2026 - Present
Link: https://codeberg.org/SunCh1p/3D-Horror-Prototype

- Developing a first-person horror game in Godot 4.7 and GDScript, engineering modular player and enemy systems for extensible gameplay
- Implemented finite-state-machine enemy AI (idle/chase/attack) and player controller, ensuring predictable, debuggable behavior across gameplay states
- Engineered a signal-bus event system decoupling gameplay, UI, and audio subsystems to keep communication clean and maintainable; implemented procedural dungeon generation for replayable level variety

OpenGL Renderer March 2026 - July 2026
Link: https://codeberg.org/SunCh1p/OpenGL-GLFW

- Designed and built a 3D renderer in C++ with OpenGL and GLFW, structuring the pipeline for extensible multi-light rendering
- Implemented Phong shading with diffuse/specular maps and a GLSL material system to deliver realistic surface lighting
- Supported directional, point, and spot light casters, enabling multi-light scenes with consistent rendering performance

OpenGL Game August 2025 - December 2025
Link: https://github.com/SunCh1p/ComputerGraphicsClass

- Developed a 3D game in C++ and FREEGLUT, driving gameplay through a custom Entity Component System for clean separation of logic and rendering
- Implemented core gameplay systems (collision, animations, projectiles, model loading, and scoring) to deliver a complete, playable experience

ItemQuest January 2025 - May 2025
Link: https://github.com/Item-Quest/TeamBravo

- Built a real-time multiplayer game with live scoring using Socket.IO, Flask, React, and TensorFlow.js, enabling simultaneous play with instant feedback
- Collaborated on a 10-person team using scrum methodology and a GitHub kanban board, ensuring on-time delivery within a single semester
